

I just wanted to thank you for all your help and advise regards my Mums old Shetland Sheepdog, Desi. As you will recall Desi is 10 years old and has bad Arthritis in her hind legs, she lives in Brisbane with my mother and is her constant companion. Mum had tried all sorts of things to help her, but was having no luck with conventional drugs etc., I suggested we give you a call and the results have been wonderful. Along with the Kinesiology ( which I admit I was very sceptical about given that you were not working on Desi but via a person surrogate), and the subsequent change in diet and homeopathic remedies, Desi is a much happier dog. The arthritis has not gone, but she is managing better, and once she is up and going, she skips along quite well, considering all she did was hobble before! One amazing thing you picked up with the Kinesiology was the fact she was very melancholy, something I remarked to Mum about as she always looked so sad, yet you never saw or meet Desi in person. The other interesting thing was when you told me the day and time you had done the Kinesiology balance this was the same day that we noticed the change in her both physically and emotionally , yet we did not know this at the time .... I cannot account for the change in Desi to any other intervention on that day or around that time. Desi is much happier and the melancholy gone .....maybe its because she is in less pain, I don't know, but she

certainly is a happier and more physically able dog and it is now some months since the Kinesiology treatment and changes to her diet and use of homeopathics, yet the improvements have been maintained. Again many many thanks for your help, Desi will be around for a few more years yet, of that I am sure.
